Co-founder & CTO of Jaden Data until June 2024 · fractional CTO and consulting partner since

Summary

Founder-CTO who built an enterprise AI company from zero to over €1M annual revenue with no external capital, grew engineering from 0 to 10, and took it through ISO 27001 and SOC 2 in three months. Ships AI systems into production at APG, KfW, Bosch and Boehringer Ingelheim, with earlier real-time systems work for ING, and stays hands-on in architecture and code. Since June 2024 a fractional CTO and consulting partner: AI delivery, security and audit readiness, technical due diligence, and cost-out infrastructure work.

Leadership Scope

Customer & commercial	Owned executive discovery, technical pre-sales, solution architecture and delivery expectations across 50+ organisations on the platform.
Architecture & delivery	Designed and shipped multi-tenant, event-driven AI systems into production, including RAG pipelines, multi-model orchestration and integrations.
Team & operating model	Built engineering from 0 to 10 and set delivery standards (code review, CI/CD gates, testing) across multiple workstreams.
Field-to-product	Turned customer delivery into reusable product capability: RAG service, LLM prompt optimisation tooling, and LLM pipeline evaluation framework.
Security & compliance	Ran the ISO 27001 and SOC 2 programmes and audits; certified in about three months for a production multi-tenant platform.

Selected Outcomes

€1M	Annual revenue exceeded; bootstrapped with no external capital
0 to 10	Engineering team growth
~3 months	ISO 27001 and SOC 2 achieved within the deadline
50+	Organisations served on the platform
99.9%	Platform uptime
over €190,000	Projected SaaS cost saving at Software AG

Experience

Independent CTO Advisory & AI Consulting

June 2024 – Present

Self-employed

- Fractional CTO and consulting partner: AI delivery, security and audit readiness, technical due diligence and cost-out infrastructure work, alongside continued AI delivery through Jaden Data.
- Software AG (since July 2026): leading a SaaS-to-on-premises migration set to save over €190,000 in subscription cost, and building AI skills inside the teams.
- anita.legal, legal AI platform: security and audit readiness alongside the CTO, SAST and SCA scanning with licence practice in the pipeline, and an on-demand agent that implements helpdesk tickets and reviews pull requests.

Co-founder & CTO

March 2021 – June 2024

Jaden Data GmbH

- Built the company from zero to over €1M annual revenue with no external capital, grew engineering from 0 to 10, and led it through ISO 27001 and SOC 2 inside three months.
- Owned technology strategy, architecture, delivery standards and technical pre-sales for 50+ enterprise customers; ran discovery, executive workshops and security reviews, and stayed hands-on in code throughout.

entAIngine: multi-tenant enterprise AI platform Technologies: AWS Lambda, ECS/Fargate, SNS/SQS, Java, Python, React, Next.js, Pinecone, pgvector, Milvus, RBAC

- Ran an AI process automation platform serving 50+ organisations at 99.9% uptime, with event-driven microservices on AWS scaling past 1,000 concurrent connections.

- Integrated AWS Bedrock, SageMaker, Azure ML Studio, Google Gemini, OpenAI and Mistral behind one model layer, so customers could deploy on the provider their compliance allowed.
- Wrote the RAG service, the prompt optimisation tool and the pipeline evaluation framework that later engagements reused, and exposed its capabilities to MCP-compatible agents.

APG (€500B+ pension fund): member-facing pension assistant, on-premises production

- Designed the architecture and AI processes for an assistant that explains pension letters in plain language with translation and audio; prototype in one day, production over twelve sprints.
- Deployed on-premises under Dutch financial regulation; the client published the project as a case study.

KfW: GenAI proof-of-concept series for document-heavy workflows

- Designed seven multi-step LLM processes for ministry reporting, partner-report validation, contract analysis and evaluation drafting, on one specification and one evaluation template, validated by domain experts on real documents.
- Added retrieval with LLM reranking and page-level citations; quantified savings of about a day per monitoring report and 15 minutes per partner-report pre-check.

Bosch: procurement and contracting AI, production MVP

- Led four projects from first workshop into the client's tendering and contracting processes: RFP drafting, proposal evaluation against set criteria, and contract negotiation through template exchange.
- Integrated with the existing procurement systems through tailored input masks and APIs, with vector retrieval over historical tenders and contracts; raised the stakeholder cadence to weekly with parallel sub-groups.

Bosch: AI supplier for engineering enablement

- Ran hackathons for Bosch employees on our own platform and coached their engineers in prompt engineering and AI-accelerated development with Cursor, Claude Code and Copilot.
- Wrote the security and responsible-use standards for enterprise AI tool adoption and set up MCP practices and custom skills inside their internal instances.

RP-Matcher: ML product matching in production

- Benchmarked five model families for matching customer inquiries to product offers; 78.4% Top-1 accuracy on the current corpus, 60% less offer preparation time.
- Engineered 25+ features and an LLM-assisted extraction pipeline that grew the labelled set from 55 to 369 matches.

Software Engineer

April 2020 – June 2021

idealo internet GmbH

- Key contributor to a six-country login rollout that generated 1.4M accounts in three months, 700% above forecast.
- Shipped production microservices and REST APIs in Java and Kotlin with Spring Boot and Spring Security, including real-time systems on Kafka and WebSockets.
- **Technologies:** Java, Kotlin, Spring Boot, Spring Security, Kafka, WebSockets, AWS

Blockchain Engineer

May 2019 – April 2020

TU Berlin - Deutsche Telekom Innovation Laboratories (T-Labs)

- Designed and deployed a distributed Hyperledger Fabric network for package tracking, with chaincode, secured REST APIs and containerised deployment.

Associate Technical Consultant

September 2016 – September 2018

SAS Institute

- Wrote a GDPR lineage plugin for SAS Data Integration Studio adopted by data analysts across the entire ING Group.
- Designed real-time data pipelines on Kafka and Flink handling thousands of events per second for a banking behavioural-marketing programme; one of the first SAS Event Stream Processing deployments in the EU.
- **Technologies:** Kafka, Flink, Camel, Java, Spring Boot, SAS ESP, SAS DI Studio

Full leadership overview: janczura.com/en/leadership

Technical Skills

AI:	LLM process design (multi-step pipelines, structured outputs, JSON hand-offs), RAG, Vector databases (Pinecone, pgvector, Milvus), LLM reranking, Prompt engineering, Prompt optimisation tooling, LLM evaluation frameworks, Multi-agent workflows, MCP (Model Context Protocol)
Architecture:	Distributed systems, Event-driven microservices, API design (REST, WebSockets, gRPC), Multi-tenant SaaS architecture, Microfrontends
Cloud:	AWS (Lambda, ECS/Fargate, SNS, SQS, CloudWatch, EC2, S3), Azure (AKS, Functions, Storage, ARM templates, Marketplace), Infrastructure as Code (AWS CDK, ARM templates)
Backend:	Java, Kotlin, Python, Spring Boot, FastAPI, Hibernate
Data:	Kafka, Flink, Camel, PostgreSQL, Cassandra, MongoDB
Security:	ISO 27001, SOC 2 Type 2, GDPR, RBAC, Security audits and risk assessment, SAST, SCA
DevOps:	Docker, Kubernetes, CI/CD, GitHub Actions, CloudWatch, ELK

Education

Technische Universität Berlin	Berlin, Germany
<i>M.Sc. Computer Science, Grade: 1.3 (A)</i>	<i>October 2017 - September 2020</i>
Warsaw University of Technology	Warsaw, Poland
<i>M.Sc. Computer Science, Grade: 1.0 (A) - The Honors Diploma</i>	<i>October 2017 - September 2020</i>
Technische Universität Hamburg-Harburg	Hamburg, Germany
<i>Exchange Semester (Computer Science)</i>	<i>October 2015 - March 2016</i>
Warsaw University of Technology	Warsaw, Poland
<i>B.Sc. Electronics and Computer Engineering, Grade: 1.0 (A)</i>	<i>October 2013 - June 2017</i>

Languages

Polish (native) · English (fluent, IELTS certified) · German (conversational)

Honors & Awards

- 2nd Place - Berlin Legal Tech Hackathon 2020**, 2020
Led the team; NLP and real-time content analysis for detecting online hate speech.
- University President's Undergraduate Scholarship**, Warsaw University of Technology, 2014, 2015, 2016, 2017
Awarded four years running for academic performance.
